

LegalEase: AI-Powered Legal Document Generator

Brainstorming & Ideation Phase

1. Team Details

Team Name: LegalEase: AI-Powered Legal Document generator

Team Members:

- 1 1. Bharathkumar A
- 1 2. Gurusankar S
- 1 3. Bikash Thaabaa R
- 1 4. Sabarivasan S

2. Problem Identification

The team identified that preparing legal documents manually can be time-consuming and difficult for users who are not familiar with legal document formats. Repeatedly entering and formatting information such as parties, dates, and terms can also increase effort.

3. Brainstorming of Possible Solutions

- Develop a simple web-based application for generating legal document drafts.
- Use Generative AI to create structured legal content from user-provided information.
- Provide commonly used document types such as NDA, Employment Contract, and Lease Agreement.
- Allow users to preview and edit generated content before downloading.
- Provide document export options such as PDF and Word.

4. Selected Idea

The team selected the idea of developing LegalEase, an AI-powered legal document generator. The application accepts basic information from the user and uses Google Gemini to generate a professional draft based on the selected document type, parties, terms, and effective date.

5. Key Features Identified

- Legal document type selection
- Party details input
- Terms and conditions input
- Effective date input
- AI-based document generation
- Generated document preview
- Editable document content

- PDF and Word download options

6. Technology Ideation

The team selected Streamlit for the frontend interface, FastAPI for the backend API, Python for application development, and Google Gemini for Generative AI-based document creation. Python libraries are used for document formatting and export.

7. Target Users

The proposed system is intended for users who need draft legal documents quickly and want a simple interface for entering basic document information. The generated output should be reviewed by a qualified legal professional before being used for actual legal purposes.

8. Final Ideation Outcome

The brainstorming process resulted in the final concept of LegalEase: an AI-powered application that simplifies the preparation of legal document drafts by combining a user-friendly interface, FastAPI backend services, and Generative AI.
